DETAILED ACTION

Claim Rejections - 35 USC § 112

1. The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

1. Claims 1-17 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the written description requirement. The claim(s) contains subject matter, which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention. Claims 1 and 13 recite the active step of determining a phase of an electric current based on a number and an arrangement of the electrodes. This appears to lack support in the specification. If the applicant feels that the specification does describe a determining step, please point out the specific page and lines in the specification that does so.

Response to Arguments

2. Applicant's arguments filed August 24, 2007 have been fully considered but they are not persuasive. The limitation of "determining a phase of an electric current based on a number and an arrangement of the electrodes" recited in claims 1 and 13 is interpreted to mean actively selecting a phase for an electric current to apply to electrodes that have been arranged in a certain pattern and based on the number of electrodes used. This active step of "determining a phase based on a number" seems

Art Unit: 1791

to encompass any number of electrodes used, for example 12 electrodes or 20 electrodes. The applicant points to specific paragraphs in the specification for examples (i.e. 4, 6, 8 and 9 electrodes) without further elaborating how these examples allow for the broader scope of the amended claim, which encompasses determining a phase based on any number of electrodes.

3. The applicant states that the *Applicants' comparison of the six-electrode structures shown in Figures 1 and 6, and the importance of determining the phase of the electric current illustrates the present inventor's understanding of this claimed limitation*. The applicant understanding of the claimed invention is not disclosure support for the claimed limitation of determining a phase of an electric current based on any number of electrodes.

Conclusion

4. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any

Art Unit: 1791

extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.
